

Release Highlights

FieldVu FV2004 Release Highlights

Date: April 16, 2020

This general release to FieldVu Cloud and FieldVu Mobile includes enhancements, customer suggested features and corrections developed since release FV2002 in February 2020.

This release focuses on FieldVu Cloud reporting and user interface problem corrections.

This release also has back end changes to provide expanded SAP Business One Cloud support. The next release is FV2006, scheduled for June 2020.

FieldVu Cloud

Reporting and Data

Line Item Details Displayed for Approvals

It is now easier for field ticket and work order approvers to see the line item details when deciding to approve or reject the documents. There is new expander arrow on the list screen that shows the labor, equipment and material line items.

Item ID	Description	Quantity	Unit	Rate	Total
-	ENGINEER	Qty 10	Hours	\$90.00	\$900.00
TRUCK	-	Qty 1	Day	\$50.00	\$50.00
P100001	Liquid Coolant	Qty 4	-	\$135.00	\$540.00
P100201	Control Regulation Unit 75	Qty 2	-	\$100.00	\$200.00
S200222	Field Service	Qty 1	-	\$225.00	\$225.00

Some FieldVu Mobile implementations hide the pricing on field tickets and work order from the field customer. In this case, the line item details will show the pricing in FieldVu Cloud for the approvers, but the pricing will still not be visible for the field customer.

Job Rental Equipment Report

This report answers the question 'What rental assets are on these jobs?'. Instead of looking at each job dispatch record, users can now run this report from the Jobs Export function and get a list of all assets for the selected jobs. The report lists the equipment type, serial numbers, customer and location for the jobs.

Release Highlights

Rental Time Report

This report answers the question 'When did these rental jobs send equipment out and when did the equipment return?.' The report shows the created, dispatch out and dispatch in dates for a job, plus any associated billing documents.

This report compliments the Field Ticket Time and Work Order Time reports. Time reports are now standard for all three document types.

Equipment Screen – Manufacturer Serial Number

For customers that track equipment by both their own unit number and the manufacturer serial number, we have included the manufacturer serial number to the Equipment list screen. This allows for quick searching of unit by either number.

FieldVu Mobile

Chrome Spell Checker

Field tickets and work orders now use the Chrome spell checker to detect spelling errors for the description fields. Spelling is checked using the standard American dictionary. Words with errors are highlighted by a red underline but are not automatically corrected. Right clicking on a highlighted word offers spelling suggestions and the ability to add the word to the dictionary.

Corrections

FieldVu Cloud – Equipment Type Charge Item Search

It is now possible to search for charge items on the Equipment Type screen. This fixes a problem that prevented the search field from working properly.

FieldVu Cloud – Job Screen

The job screen now automatically populates data based on the filter selections. Previously, the screen did not display any data until the filters were selected. This improves performance and allows users to find jobs quicker.

SAP Business One Cloud Integration

Location Name

The customer location name and address are now displayed on the FieldVu Cloud job overview screen. The B1 business partner default ship to name and address are used.

Job Ends on Date

FieldVu Cloud jobs now have a default job ends on date for projects that do not have a Due Date. The Due Date is not mandatory in the B1 Cloud project, so FieldVu now populates a date based on a set time duration after the start date. This time duration is a company configuration.
