

Release Highlights

FieldVu FV2006 Release Highlights

Date: June 16, 2020

This general release to FieldVu Cloud and FieldVu Mobile includes enhancements, customer suggested features and corrections developed since release FV2004 in April 2020.

This release focuses on new functionality in the areas of equipment management, global searching and reporting.

The next release is FV2008, scheduled for August 2020.

FieldVu Cloud

Equipment Management

A new module has been added to FieldVu Cloud called Equipment Management, providing detailed equipment analysis at the individual serial number level. At a glance, you will be able to see revenue, maintenance, and history information. If your equipment has connected IoT devices, you will see live data.

Equipment Management ties together equipment usage, maintenance, history and operating costs into a single dashboard.

The screenshot shows the 'Equipment Management Item' page for BH1001 (Backhoe, On Rent). It features several sections: Scorecard, Maintenance, Meters, Live Data, Historical Data, and History.

Scorecard

Days Owned	463	Work Orders	107
Days in Use	206	Total Labour Hours	100
Revenue Earned	\$123	Total Labour Cost	\$8,179
Known Costs to Run	\$9,909	Total Material Cost	\$9,909
Profit	-\$9,786		

Maintenance

Last Maintenance Date	October 3, 2019
Preventative Schedules	12
Predicted Next Maintenance	July 1, 2019 for Insurance

Meters

Hours	1,600 on September 23, 2019
Odometer	34,001 on October 20, 2019

Live Data (No active sensor associated with this Equipment.)

Historical Data (Jun 1, 2020) - There is no historical data to display

History

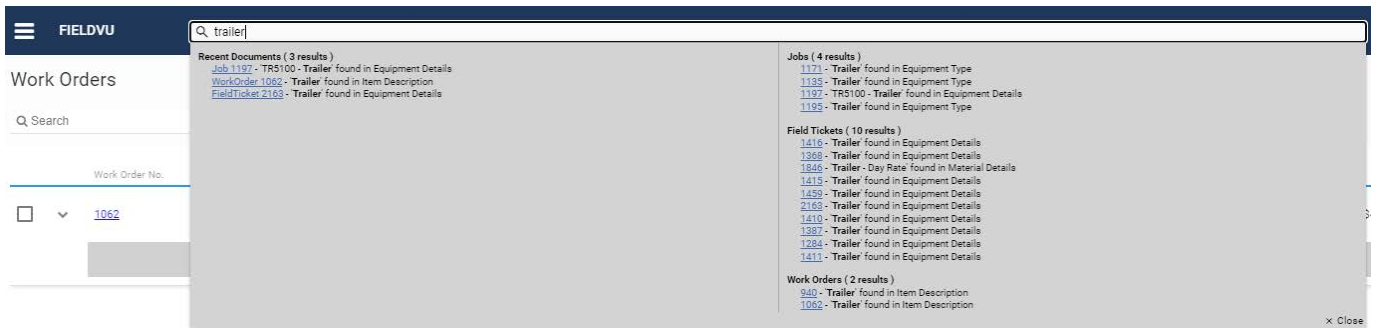

Date	Document Type / Event	Document No.	Document Status	Job / Customer
May 18, 2020	Dispatch Out			1184 - Excess Equipment Rental Job 2 Silverstar Wholesale Corp
May 14, 2020	Work Order (unscheduled)	1085	Unsubmitted	1109 - Preventative Maintenance

Release Highlights

Global Search

There is now a global search in FieldVu Cloud that greatly simplifies the searching for jobs, locations, or tickets.

Simply type in your search text and the entire FieldVu database will be searched for your text. This will show recent documents, jobs, field tickets and work orders. Then you can click into the document using the links.

Reporting

Job Line Item Detail Report

It is now easier to track the parts, services or equipment used on jobs, field tickets and work orders. The Job Line Item Details reports information about each line item on field ticket or work order, including the job, date, description, item code, qty and price.

Job Items Consumer Report

Sometimes, you need to know which materials are on unapproved field tickets and work orders before the documents get approved and sent to the ERP system. This is especially important if your ERP system does not send accurate inventory stock levels to FieldVu

Now, there is a convenient report that lists the materials that will be consumed from inventory when the documents are approved, including the inventory or logistics area. This will allow your inventory control to transfer stock to the locations before the approval.
